KARTON

driven by care

A close-up photograph of a child's hand holding a large, golden-brown chocolate chip cookie. The child is wearing a white shirt with red and blue stripes on the sleeves. The background is a plain, light-colored wall.

GREAT
with triple protection

UNIFOOD®

Cartonboard for food packaging by WEIG

Driven by care – for you!

We are a family-owned, medium-sized group of companies comprising three business units with decades of experience:

- Recycling (paper and other valuable substances)
- Cartonboard production (packaging board and plasterboard liner)
- Packaging (cardboard packaging and cores)

In all fields we work together with multinational enterprises but also with companies operating locally.

We envisage our cooperation to be long-term and ongoing, as continuity, combined with reliability and care, are the cornerstones of our planning and thinking. On the product level for example we complete the fibre cycle in the sense of a “circular economy” and operate sustainably.

We are very conscious about assuming responsibility for business partners, employees, for the environment and for the society as a whole.

Driven by care – for you!

Protection provides safety

Cardboard packaging meets numerous demands: It provides the product with high value due to its design and finish. When a purchase decision is made it significantly contributes to the product's sell-off at the point of sale. But most of all: it protects.

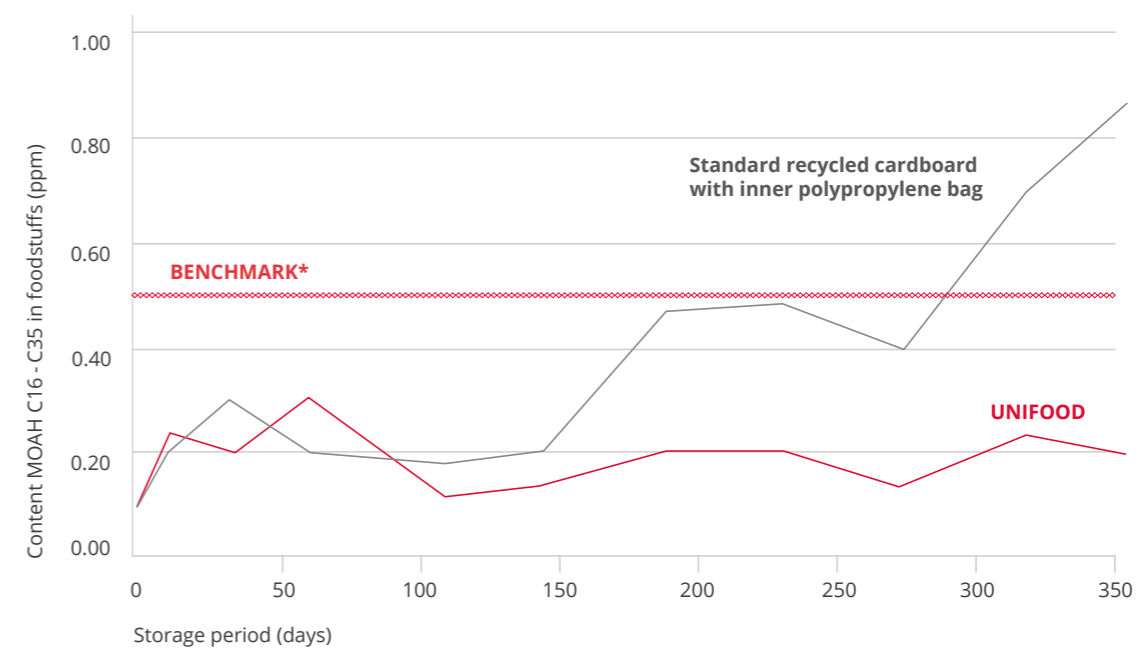

It protects the product against damage or loss. It protects the environment as it is produced from renewable raw materials and is easy to recycle. It protects the consumers with an integrated barrier against the migration of unwanted substances from the packaging itself but also from the environment.

Last but not least we ultimately protect your brand as the consumer can be certain that the foodstuffs are optimally packaged.

The barrier cardboard UNIFOOD® from WEIG thus has a triple protective effect. It protects:

- the environment
- the consumer
- and the brand

This threefold protection provides you with the assurance you need for your branded products.

* Benchmark being discussed at time of printing

UNIFOOD® protects – consumers and brands

UNIFOOD® barrier cardboard from WEIG has already earned the trust of the food industry as it is used by well-known brands and trademarks. If used properly, naturally UNIFOOD® complies with all current national and international regulations and laws.

Customer-specific requirements beyond this can also be realised by arrangement. The permanent monitoring of raw materials, cardboard, packaging and

foodstuffs by our own laboratory provides us with the required assurance that is needed here for branded companies and consumers. External certification by renowned institutes gives us additional certainty.

The proven and monitored barrier effect provides extra protection for the brand and thus for our customers when it comes to legal risks. And it protects the consumer.

UNIFOOD® protects – food as well as environment

From the outside the appearance of UNIFOOD® is identical with that of other WEIG cardboard products. The inner side is available in a high-quality white finish based on the optics of virgin fibre-based board or with the usual look of recycled cardboard. But with an additional benefit: the barrier function. It protects against the migration of defined unwanted substances like mineral oils, phthalates as well as bisphenol A – also in direct contact with the product without additional inner packaging. This means that the food packaged in UNIFOOD® is protected against interactions with other products or their packaging. At the same time there is a positive side

effect with regard to the preservation of aroma and freshness. The slightly oil repellent barrier protects from the inside against the permeation of fats from the food and contributes to the attractive look of the packaging throughout the entire selling time on the shelf.

UNIFOOD® can generally be disposed of in the normal waste-paper cycle and be reused as raw material. This also emphasises the economical and ecological benefits compared to other materials.

By the way, UNIFOOD® is also available as FSC- or PEFC-certified version.

The WEIG Group – offers more than you expect

By combining and integrating the units of recycling, cardboard and packaging we form our own integrated value added chain.

The recycling business unit takes over waste paper from municipalities, commercial and industrial enterprises, trade and authorities and assigns the fibres to the optimum use. Carton-board manufacturing produces packaging board and plasterboard liner and

supplies it to the European packaging industry and the global plasterboard industry. Packaging produces cardboard packaging in the form of product packaging, shelf or transport packaging or in the form of spirally wound cores.

The internal logistics department links all business units and provides delivery reliability and guarantee of supply “down to the last mile” for our customers.

RECYCLING PACKAGING CARDBOARD

In line with how we view ourselves as an industrial service provider we provide our customers with so-called “value added services” over and beyond our products. You can rely on our knowledge of applications and our offers to give you relevant added value. This includes most of all:

- Product development and technological consultation
- Technical customer service with fast response

- Our own laboratories for monitoring materials and production processes
- Our own logistics centre and logistics concepts for a reduced environmental impact

The use of these offers presents our customers an increased security with regard to product and processing quality, continuously improves the certainty of supply as well as process reliability and strengthens their capacity to compete.
