UNIPLAC®

Plasterboard liner by WEIG group

Driven by care – for you!

We are a family-owned, medium-sized group of companies comprising three business units with decades of experience:

- Recycling (paper and other valuable substances)
- Cartonboard production (plasterboard liner and packaging board)
- Packaging (cardboard packaging and cores)

In all fields we work together with multinational enterprises but also with companies operating locally.

We envisage our cooperation to be long-term and ongoing, as continuity, combined with reliability and care, are the cornerstones of our planning and thinking. On the product level for example we complete the fibre cycle in the sense of a “circular economy” and operate sustainably.

We are very conscious about assuming responsibility for business partners, employees, for the environment and for the society as a whole.

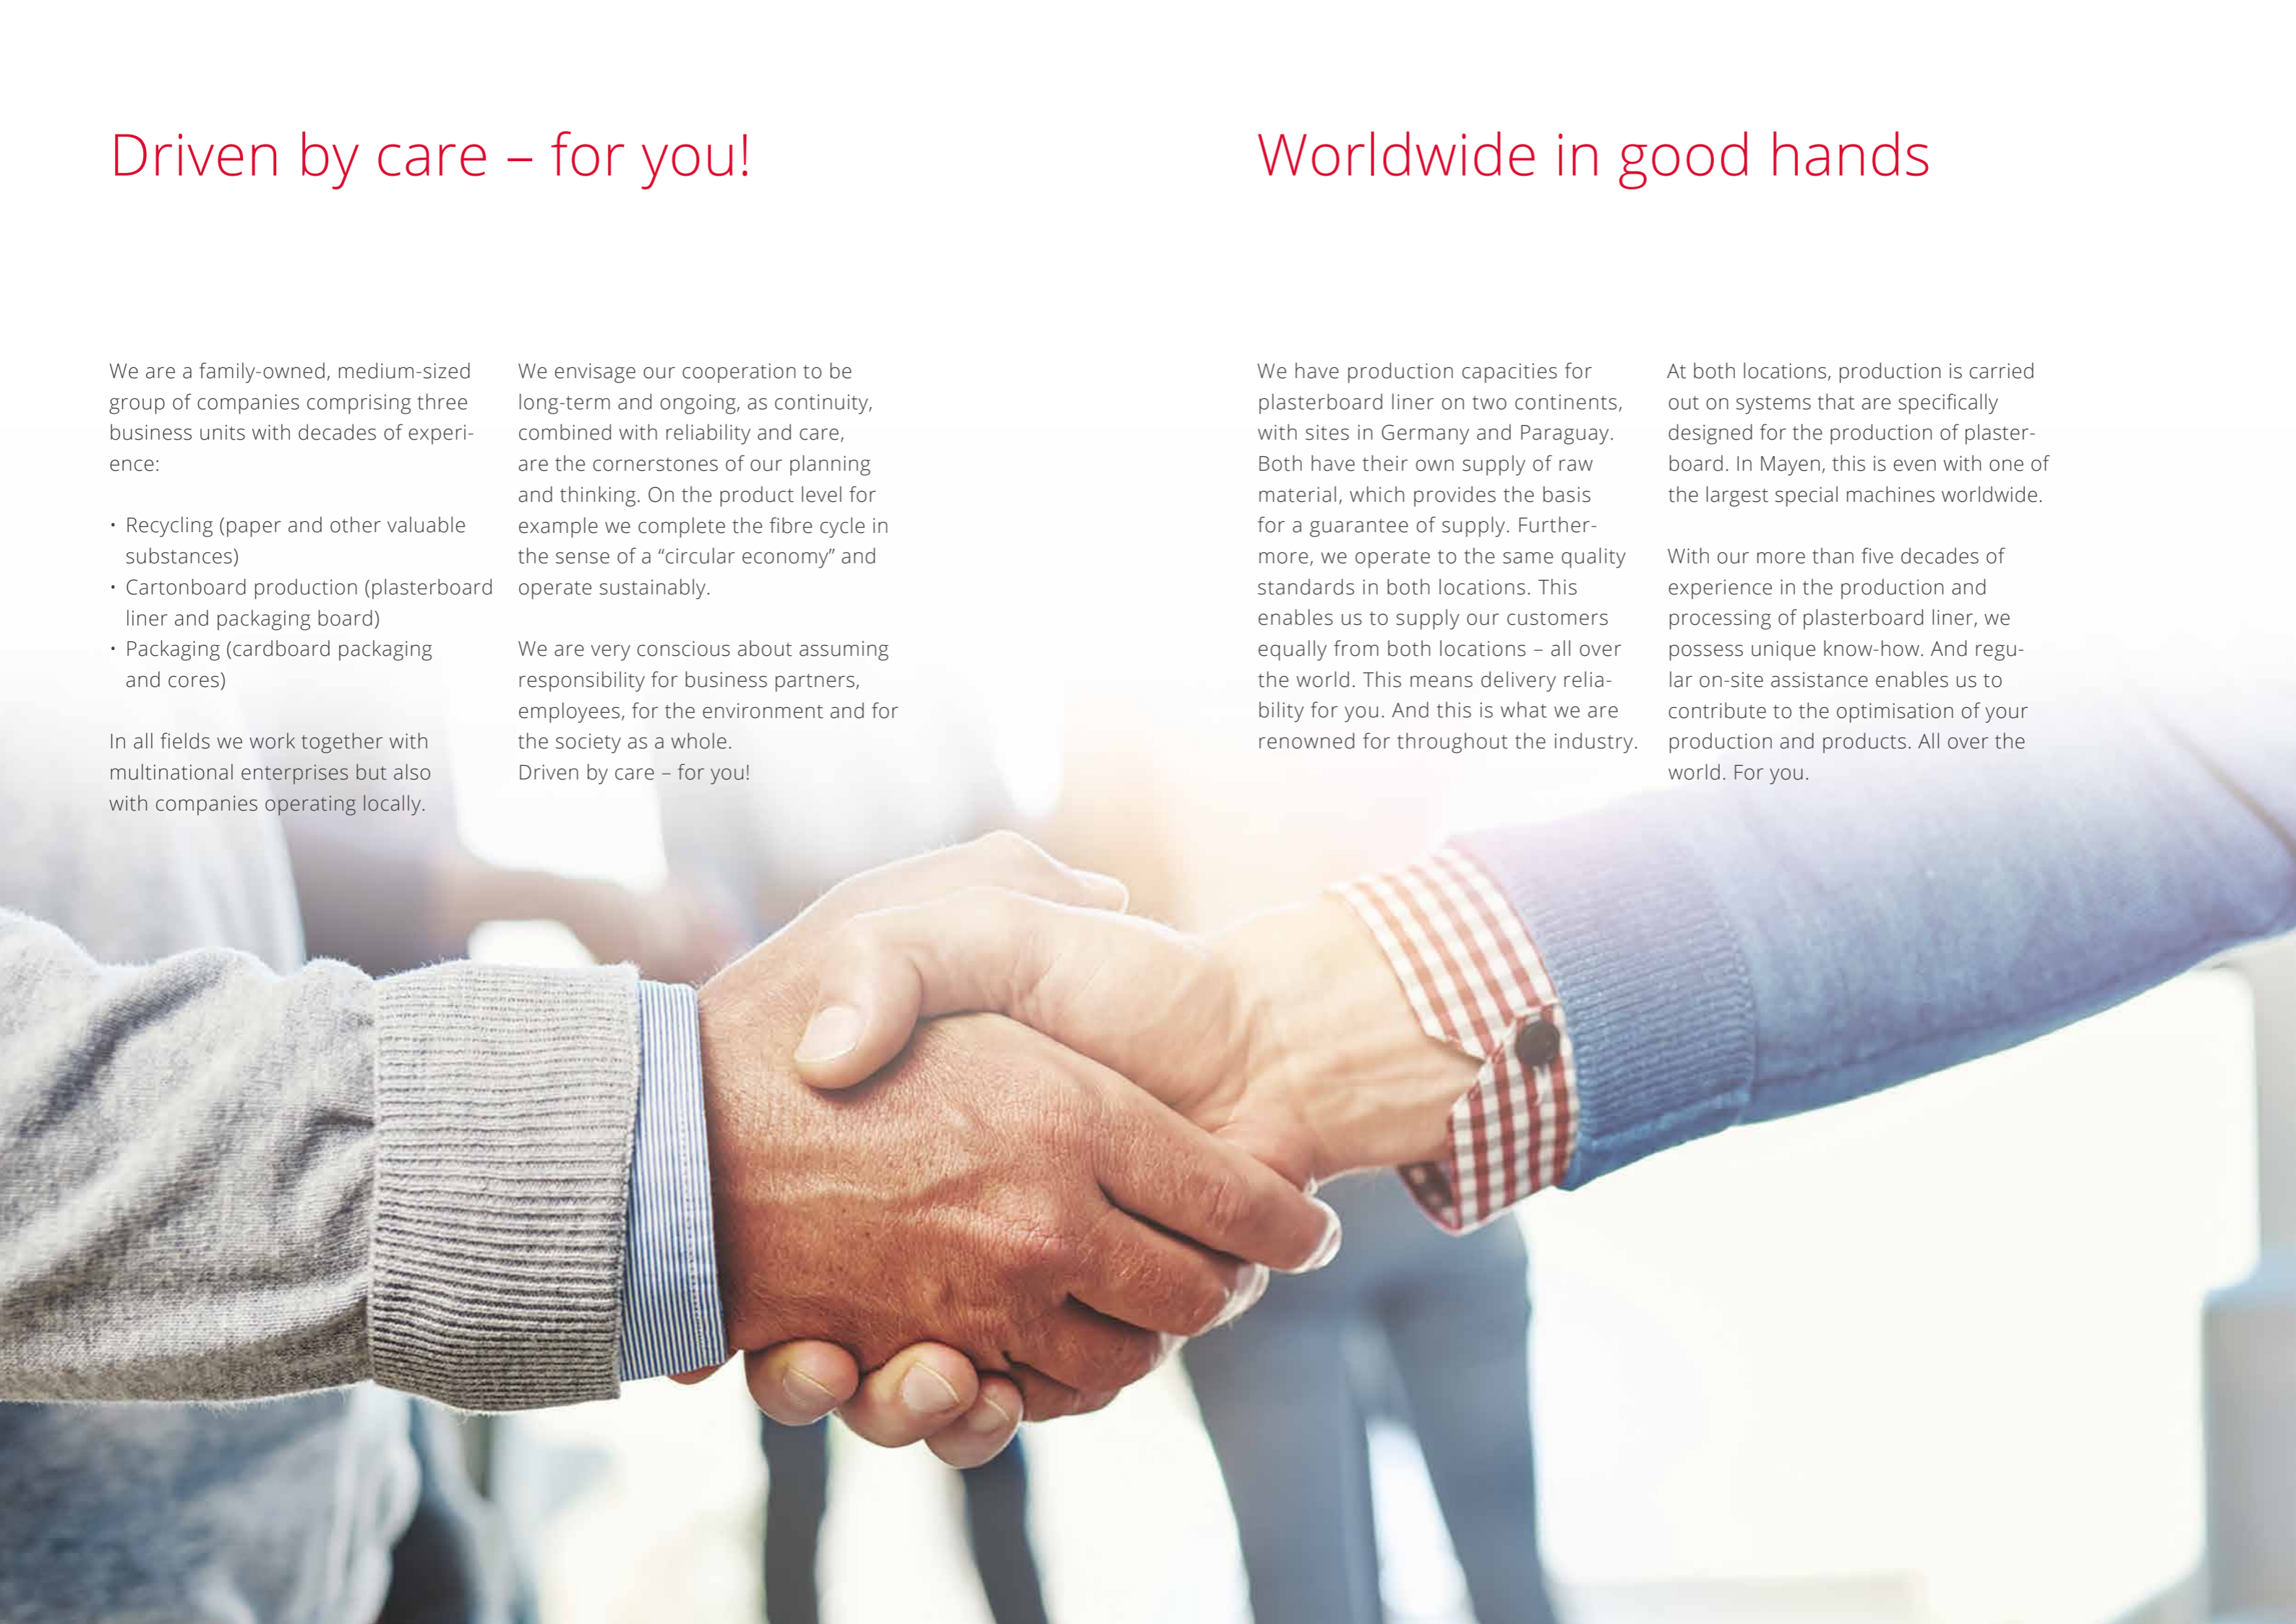

Driven by care – for you!

Worldwide in good hands

We have production capacities for plasterboard liner on two continents, with sites in Germany and Paraguay. Both have their own supply of raw material, which provides the basis for a guarantee of supply. Furthermore, we operate to the same quality standards in both locations. This enables us to supply our customers equally from both locations – all over the world. This means delivery reliability for you. And this is what we are renowned for throughout the industry.

At both locations, production is carried out on systems that are specifically designed for the production of plasterboard. In Mayen, this is even with one of the largest special machines worldwide.

With our more than five decades of experience in the production and processing of plasterboard liner, we possess unique know-how. And regular on-site assistance enables us to contribute to the optimisation of your production and products. All over the world. For you.

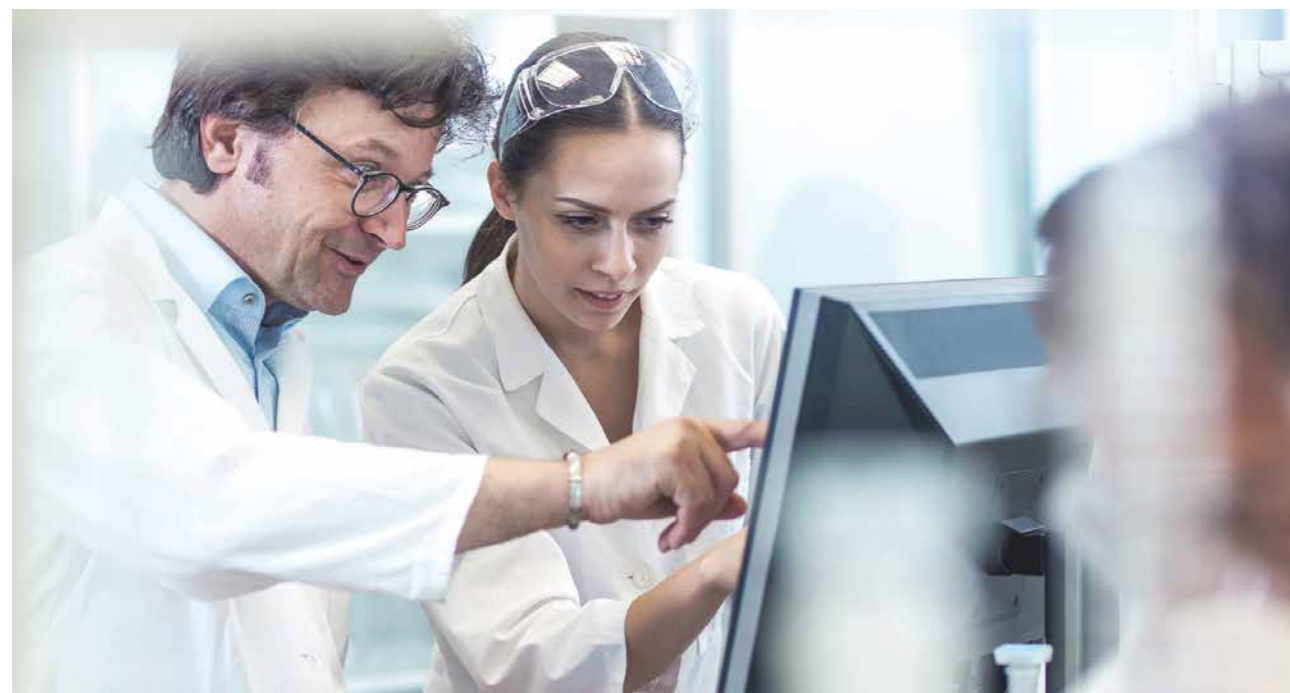

UNIPLAC® – reliable efficiency for you

UNIPLAC® plasterboard liner made by WEIG permits maximum production speeds at low basis weights, whether for standard types or for individually customised specifications. This results in constantly high product quality for plasterboard panels and projectable efficiency in plasterboard production. Amongst others, our know-how in the production and processing of plasterboard is reflected in our provision of special recipes that are adapted to the customers' raw material. Despite individualisation, these offer high product consistency and supply guarantee.

With a permanent exchange of information between application engineers

and paper technologists, we continuously develop our products further in line with customer demands and market requirements. We also consult on occasion with renowned external specialists from the plaster raw materials industry or process technology.

With the aim of technological optimisation of production, WEIG service staff supports our customers through regular visits or short-notice assignments in their factories worldwide. This always has one ultimate goal: the highest possible, reliable efficiency in plasterboard manufacturing for you.

UNIPLAC® – reference quality for all

UNIPLAC® sets on quality standards and provides reference quality in plasterboard production. When commissioning new plasterboard manufacturing lines, UNIPLAC® from WEIG is the product of choice, in order to be able to produce saleable boards from the start.

In production, the UNIPLAC® cardboard is characterised by excellent runability and a low reject rate and is available in the following standard and special

grades: standard grades (yellow and grey board) for the top and reverse side of the plasterboard.

Special grades for plasterboard liners for special fields of application:

- Damp room
- Fire protection
- Noise protection
- Floor

The WEIG Group – offers more than you expect

By combining and integrating the units of recycling, cardboard and packaging we form our own integrated value added chain.

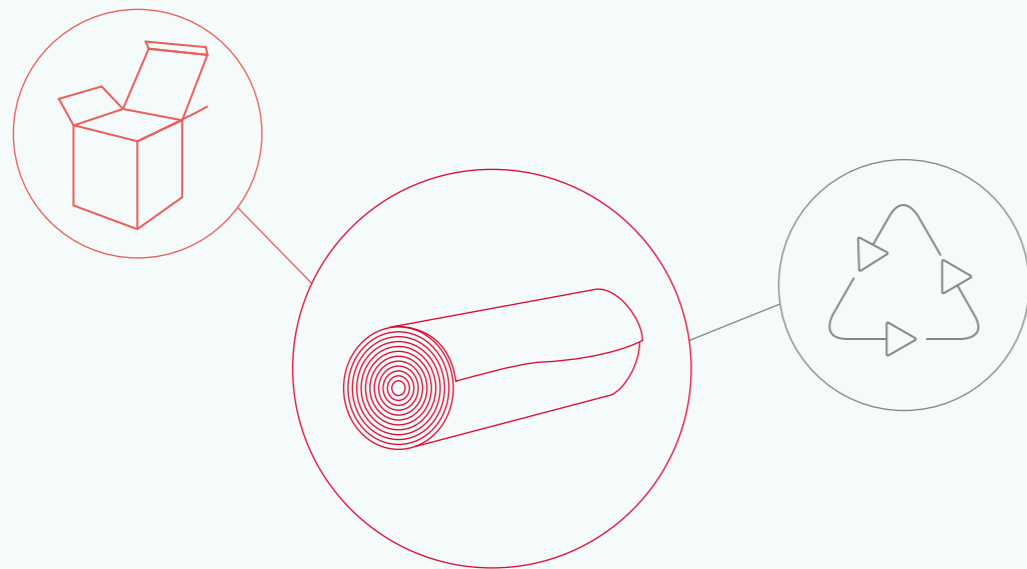

The recycling business unit takes over waste paper from municipalities, commercial and industrial enterprises, trade and authorities and assigns the fibres to the optimum use. Cartonboard manufacturing produces plasterboard liner and packaging board and sup-

plies it to the the global plasterboard industry and the European packaging industry. Packaging produces cardboard packaging in the form of product packaging, shelf or transport packaging or in the form of spirally wound cores.

The internal logistics department links all business units and provides delivery reliability and guarantee of supply “down to the last mile” for our customers.

RECYCLING PACKAGING CARDBOARD

In line with how we view ourselves as an industrial service provider we provide our customers with so-called “value added services” over and beyond our products. You can rely on our knowledge of applications and our offers to give you relevant added value. This includes most of all:

- Product development and technological consultation
- Technical customer service with fast response

- Our own laboratories for monitoring materials and production processes
- Our own logistics centre and logistics concepts for a reduced environmental impact

The use of these offers presents our customers an increased certainty with regard to product and processing quality and continuously improves the security of supply as well as process reliability and strengthens their capacity to compete.
